

THE TRANSPORTER* LINE:

**SAFETY AND SECURITY...LOCATION TO LOCATION...
ROOM TO ROOM...GALLERY TO GALLERY.**

We listened, we designed, we innovated. That's why the new CSI Transporter 101 and Transporter 201 will change the way you move your collections and exhibitions. They arrive fully assembled and provide unprecedented, easy, secure maneuverability...across the hall to another room, to another gallery or to another location.

Painting Storage and Transportation Systems

*Patent Pending

UNPARALLELED EFFICIENCY AND SAFETY EVERY STEP OF THE WAY

As the latest extension of CSI's innovations for moving painting storage systems, both the Transporter 101 and Transporter 201 systems arrive fully assembled and ready for use. The new systems put unparalleled maneuverability under your control because they are designed and built for the height of a standard 7-foot tall doorway and roll smoothly into and out of box trucks. Transporter systems are available to fit your specific requirements for size, number of units and spacing.

Like our other CSI products, the Transporter systems are designed for the day-to-day rigors of museums and galleries. They are constructed of aerospace aluminum for lighter weight and greater strength and are non-reactive with no off gassing.

SAFETY FIRST

The method of attaching paintings and other objects to the moving panels provides protection from vibration and abrasion that could occur during movement. Transporter systems may be equipped with any combination of moving panels for paintings, rolled textiles or artifacts.

DESIGN INNOVATIONS

SUPERIOR MANEUVERABILITY: Lockable swivel casters make the Transporter systems maneuverable even in narrow or close confines. When locked, the casters render the system immovable, which accommodates easy pull out/push back of the moving panels. Handles located at all four corners of the system allow ease of movement down corridors and in tight spaces.

EXCELLENT SUPPORT: As each individual panel is pulled out of either the Transporter 101 or Transporter 201 system, an aerospace-inspired front wheel extends and automatically locks in place to support the panel for its full extension and retraction. The front wheel automatically retracts as the panel is pushed back into the system.

HIGH VISIBILITY: Optically transparent Lexan polycarbonate panels on the top, bottom, back and sides of Transporter 101 and Transporter 201 ensure that your artwork and objects are always visible, adding a further level of protection and security.

EASY ACCESS: Both the Transporter 101 and Transporter 201 systems utilize archival marine-quality canvas doors for ready access to artwork and objects. No additional space is required for a door swing.

TRANSPORT SECURITY: Each moving panel locks in the stored position to prevent movement.

TOMORROW TODAY

The Transporter systems were conceived, designed and engineered to meet the evolving needs of painting collections today and tomorrow. Let CSI change the way you move your collections and exhibitions...because the future deserves the opportunity to learn from the past.
